

Bedford, NH – October 3, 2007 -- GlobalCerts announces today that it has been granted four patents by the US Patent & Trademark Office (USPTO) related to Internet Security.

Three of these patents cover its **SecureTier technology**; a unique way to efficiently manage and validate digital certificates used in secure communications. All of GlobalCerts' products are powered by this highly performant, scalable and interoperable digital certificate management technique.

Roland S. Gerard, chairman and CEO said: *“SecureTier technology is a true enabler for the Internet. The time has now come where Internet users can utilize all the encryption capabilities to their fullest; hence making the Internet safer for communications”*.

The fourth patent is related to its **SecureMessenger**; which allows any of its email customers to communicate securely with anyone around the world requiring nothing more than a modern Web Browser.

Gerard said: *“The granting of those patents recognizes the importance of our multi-applications technology in securing Internet communications of all sorts. It opens the door to these enterprises of the future wishing to maximize their organization while utilizing the Internet”*.

About GlobalCerts:

GlobalCerts is the premier enterprise secure messaging solution for business, financial institutions, governments, healthcare and other organizations with a need to protect confidential information. GlobalCerts enables enterprises to protect their sensitive information assets through affordable, easy to use, easy to deploy solutions.
