GlobalCerts Email Encryption Technology Displaces Overnight Delivery Services

Companies Save Big – and Maintain Secure Audit Trail

Richmond, VA (March 7, 2006) – GlobalCerts, LC, a leading secure email provider to financial services firms, healthcare providers, and government agencies, is giving Fedex, UPS and the USPS a run for their money.

Electronic communications, particularly e-mail, have already supplanted the postal service—commonly known in the high-tech community as “snail mail”; however, with the passing of privacy legislation such as GLBA and HIPAA, organizations are under increasing pressure to secure email communications with encryption.

That’s where GlobalCerts comes in. With the GlobalCerts SecureMail Gateway solution, email communications can be seamlessly encrypted and digitally signed with no additional client software installation, user training, or system administration overhead. GlobalCerts works seamlessly in a multitude of email vendor environments, allowing users to send and receive secure, encrypted email as normal messages – even to and from recipients that do not have existing encryption capabilities.

"Compliance with GLBA is important to us; however, the deciding factor was our ability to ensure our valued customers that they could use secure messaging to conduct their investment business with us safely, and privately," said Stephen Irish, Chief Information Officer for Enterprise Bank. "GlobalCerts provides a unique appliance solution that was extremely easy to deploy and manage with no desktop software requirements. The SecureTier feature automates digital certificate management services making our job even easier."

Not only are GlobalCerts’ customers enjoying reduced costs over traditional delivery methods, but they also enjoy increased productivity and client responsiveness from the added security measures.

"Underwriters can directly equate saving time and money to the GlobalCerts SecureMail Gateway solution," said Grant Nickle, Director of IT at Underwriter’s Safety and Claims. "We can send secure emails containing confidential information immediately instead of using costly overnight delivery services." Grant adds, "The GlobalCerts solution gets the information to the right people quickly and securely."

Mid-Atlantic Credit Unions Network Services Manager Jeff Sarlouis said, "Rather than use expensive delivery services, the SecureMail Gateway provided us with an inexpensive and easy-to-use email security solution, with no need to manage encryption keys. We had the system installed, and handling live traffic in a very short time, and we were able to add customers automatically."
